Agency homepage	http://www.health.wa.gov.au/home/
Title	Hospital separations by principal diagnosis and Indigenous status
Dataset name	Hospital separations by principal diagnosis and Indigenous status
Dataset link	
Subject	Hospital separations by principal diagnosis and Indigenous status
Frequency	Annual
Rights	
Description	<p>Number of hospital separations from 2000 to 2008 by principal diagnosis and Indigenous status. The hospital separation data presented in this file are based on the postcode of the patient's residential address. The local government figures have been derived by converting postcode information to the Australian Standard Geographical Classification using a geographic concordance. Where a residential address was given as a post-office box and could not be directly assigned to a local government area, the patient information is only made available at the aggregated statistical sub-division geographic level.</p> <p>The diagnosis classification used is the International Statistical Classification of Diseases and Related Health Problems, 10th Revision.</p> <p>All advice and information on the Department of Health's website is given in good faith and is based on sources believed to be reliable and accurate at the time of release on the Site. The State of Western Australia, the Department of Health WA and their respective officers, employees and agents ("the Relevant Persons") do not accept legal liability or responsibility for the content of the advice or information or any consequences arising from its use. For further disclaimer information see www.health.wa.gov.au/home/disclaimer.cfm</p>
Coverage	These data are derived from records submitted by Western Australian public and private hospitals to the Department of Health's Morbidity Data System. Excludes unqualified newborns, boarders, posthumous organ procurements, aged care residents, and funding hospital (duplicate) cases. A person may be counted more than once if admitted to hospital multiple times.

Source: Department of Health

(a) A patient may be counted more than once if admitted to hospital multiple times.

(b) All frequencies of less than 5 have been suppressed.

(c) Caution must be used when comparing data across years as variation in disease hospitalisation frequencies may be influenced by revisions of clinical coding. For example the coding of diabetes and the coding of congenital abnormalities have both undergone significant changes affecting two of the disease categories

Source: Department of Health

(a) A patient may be counted more than once if admitted to hospital multiple times.

(b) All frequencies of less than 5 have been suppressed.

(c) Caution must be used when comparing data across years as variation in disease hospitalisation frequencies may be influenced by revisions of clinical coding. For example the coding of diabetes and the coding of congenital abnormalities have both undergone significant changes affecting two of the disease categories

(a) A patient may be counted more than once if admitted to hospital multiple times.

(b) All frequencies of less than 5 have been suppressed.

(c) Caution must be used when comparing data across years as variation in disease hospitalisation frequencies may be influenced by revisions of clinical coding. For example the coding of diabetes and the coding of congenital abnormalities have both undergone significant changes affecting two of the disease categories
